Skills

Programming Languages:

Python (primary), TypeScript, JavaScript, C++, HTML/CSS

Backend & API Development:

FastAPI, REST API design, Microservices architecture, API integration (Microsoft Graph API, third-party APIs)

Databases & Caching:

PostgreSQL, SQL Server, Redis (caching, performance optimization)

AI & Machine Learning:

OpenAI (Agents, Assistants, Responses, Embeddings), Gemini, Grok, NLP, Retrieval-Augmented Generation (RAG), Vector Search, LLM Fine-Tuning

Frameworks & Libraries:

FastAPI, Node.js, React, React Native, .NET, Pandas, NumPy

DevOps & Infrastructure:

Docker, Docker Compose, CI/CD concepts, Linux environments

Tools & Platforms:

Git, GitHub, Firebase, n8n

System Design & Engineering:

Scalable system design, high-performance backend systems, logging & monitoring, error handling, automation workflows

Core Computer Science:

Data Structures & Algorithms

About me

AI Engineer with a backend focus, building systems for automation, customer service, and AI-driven applications. I mainly work with Python and FastAPI, designing APIs, integrating LLMs, and developing RAG-based solutions.

My work includes optimizing system performance, handling asynchronous workflows, and building scalable architectures with caching and external API integrations. I'm comfortable taking systems from design to deployment and keeping them running reliably in production.

I focus on writing clean, maintainable code and building systems that are practical, stable, and actually useful in real-world environments.

Education

B.Sc. Computer Science

2019 - 2024

University of Missouri - Kansas City

Experience

AI Engineer

September 2025 - Present

Veyselolu LLC - Baku, Azerbaijan

Designing and developing AI-powered multi-agent systems that handle task automation and information retrieval.

AI Developer Intern

June 2024 - July 2024

"Araz" Supermarkets Chain - Baku, Azerbaijan

Developed an AI-powered Customer Service Chatbot for a retail chain, combining dataset-based Q&A with GPT fallback, vector embeddings for improved accuracy, and automated dataset updates

Backend Developer

May 2023 - May 2024

Cerner Corporation - Kansas City, Missouri, USA

Designed and optimized scalable backend systems for healthcare applications, integrating EHR data and improving performance, reliability, and overall system efficiency in a high-traffic enterprise environment.

Research Assistant

January 2022 - April 2023

UMKC School of Science and Engineering - Kansas City, Missouri, USA

Developed computer programs to extract data from a computer and build knowledge graphs for an ongoing research project sponsored by the National Science

Language

- Azerbaijani (Native)
- English (C1)
- Turkish (C1)
